

REPRESENTATIVE “GREEN” BUILDING PROJECTS

Over the years Winkelman Building Corporation has been involved in constructing several buildings with “green” building features. The following buildings have incorporated the use of wind or solar energy; geothermal heating and cooling systems; the use of skylights or daylighting windows; building positioning to take best advantage of the power of the sun; earth-berming of the building; insulated wall panels; alternative fuel systems for heating and back-up generators; energy conserving lighting; motion detectors to turn off lights in unoccupied areas; photo sensors to regulate the amount of light in a room; low flow water systems; on-site storm water reclamation or rain gardens. Most of these projects have incorporated several of the previously mentioned systems.

“Green” projects built in the last five years

Kennedy Community School (Gold LEED)	St. Joseph, MN
